Poojan Shah

Senior Software Developer | San Francisco, CA

shahpoojan0617@gmail.com | +1 (201) 936-1567 | LinkedIn: in/poojan-shah | website: poojan-shah-portfolio

SUMMARY

Senior Software Developer with 7+ years of experience building scalable enterprise applications using Java, Spring Boot, and RESTful services in cloud-native environments. Strong background in microservices architecture, system integration, and improving performance of high-volume backend workflows. Experienced in modernizing legacy systems, improving service reliability, and driving the full SDLC from requirement analysis and design to implementation, deployment, and production support. Known for partnering closely with business teams, coaching developers, and delivering solutions that enhance customer experience, reduce cost, and align with long-term product strategy. Hands-on experience applying data structures and algorithmic thinking to optimize performance, scalability, and reliability of backend services.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, SQL, PL/SQL

Frameworks & Technologies: Spring Boot, Spring MVC, Microservices, REST APIs, OAuth2, Angular, React, Apache Kafka

AI & Automation: Claude Skills, AI-assisted debugging workflows

Database: Oracle, SQL server, MySQL, MongoDB

Cloud & DevOps: AWS, Azure, GitHub Actions, Jenkins, Kubernetes, Docker, CI/CD Pipelines

Observability & Monitoring: Splunk, ElasticSearch, Datadog

AWS Services: EC2, Lambda, API Gateway, DynamoDB, RDS, CloudFormation, S3

PROFESSIONAL EXPERIENCE

CSX, San Francisco, CA (Remote) | *Senior Software Developer* **Aug 2021 – Current**

Tech: Java, Angular, Microservices, RESTful API, Spring MVC, Spring Boot, MongoDB, Claude Skills

- Designed and enhanced backend services that process high-volume operational workflows, ensuring accuracy, stability, and smooth integration across upstream and downstream systems
- Partnered with business stakeholders to refine requirements, define technical specifications, and outline performance and security expectations for both new features and system enhancements
- Built an AI-assisted triaging workflow using Claude Skills that analyzed JIRA tickets, correlated logs from Elastic and Splunk, and generated technical recommendations; enabled automated quick-fix updates and pull request creation for minor issues
- Implemented CI/CD pipelines using GitHub Actions and Jenkins, reducing deployment time by 70% and improving release predictability across multiple environments
- Optimized DB2 and Oracle data processing through query tuning and Java multithreading techniques, improving batch throughput and reducing processing delays

Kroger, Blue Ash, OH | *Software Developer* **Nov 2018 - July 2021**

Tech: Java EE, Angular, React, JavaScript, Microservices, RESTful API, Spring Boot, Kafka, AWS, Docker, Jira

- Collaborated closely with the scrum team and product owners, leveraging Jira for feature backlog management and release planning, which boosted customer goal delivery by 30% and team productivity by 20%
- Designed and developed Single page components with Angular, HTML5, CSS3, and Bootstrap, improving user experience and achieving a 30% faster load time
- Debugged complex production issues across microservices by analyzing logs, tracing API flows, and coordinating fixes across dependent teams
- Participated in defining project scope, documenting system requirements, estimating technical effort, and ensuring solutions aligned with regulatory and operational constraints common in financial systems
- Led peer design and code reviews to promote clean coding practices and improve overall code quality across the team

EDUCATION

- **M.S in Computer Engineering,** New Jersey Institute of Technology, Newark, NJ
- **B.E in Electronics and Communication Engineering,** Gujarat Technological University, India
