Poojan Shah

Senior Software Developer

shahpoojan0617@gmail.com | San Fransico, CA | +1 (201) 936-1567 | LinkedIn: in/poojan-shah

SUMMARY

Senior Software Developer with 7+ years of experience building and supporting enterprise-grade applications using Java, Spring Boot, REST APIs, and cloud-native technologies. Strong background in system integration, microservices architecture, and high-performance backend development across AWS and Azure. Experienced in modernizing legacy systems, improving service reliability, and driving the full SDLC from requirement analysis and design to implementation, deployment, and production support. Known for partnering closely with business teams, coaching developers, and delivering solutions that enhance customer experience, reduce cost, and align with long-term product strategy. Hands-on experience applying data structures and algorithmic thinking to optimize performance, scalability, and reliability of backend services.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, SQL, PL/SQL

Technology & Framework: Spring MVC, Spring Boot, Microservices, OAuth2, ORM, Angular, Apache Kafka, Copilot

Database: Oracle, SQL server, MySQL, MongoDB

Cloud & DevOps: AWS, Azure, GitHub Actions, Jenkins, Kubernetes, Docker, CI/CD Pipelines, Datadog

AWS Services: EC2, Lambda, API Gateway, DynamoDB, RDS, CloudFormation, S3

Architecture & Expertise: Event-driven systems, distributed transaction handling, multithreading, API security, system integration

PROFESSIONAL EXPERIENCE

CSX, San Fransico, CA (Remote) | *Senior Software Developer* **Aug 2021 – Current**

Tech: Java, Angular, Microservices, RESTful API, Spring MVC, Spring Boot, MongoDB, GitHub Actions, Datadog

- Designed and enhanced backend services that process high-volume operational workflows, ensuring accuracy, stability, and smooth integration across upstream and downstream systems
- Partnered with business stakeholders to refine requirements, define technical specifications, and outline performance and security expectations for both new features and system enhancements
- Drove significant system performance wins by implementing multithreaded and data sharding logic (MongoDB aggregation) on high-volume workflows, cutting query execution time by 95%, and boosting service throughput
- Implemented CI/CD pipelines using GitHub Actions and Jenkins, reducing deployment time by 70% and improving release predictability across multiple environments
- Enhanced high-performance data models for DB2/Oracle, enhancing querying, streaming, and batch processing speeds by 40%, while applying multithreading in Java to reduce processing time by 70%

Kroger, Blue Ash, OH | *Software Developer* **Nov 2018 - July 2021**

Tech: Java EE, Angular, ReactJS, JavaScript, Microservices, RESTful API, Spring Boot, Kafka, AWS, Docker, Jira

- Collaborated closely with the scrum team and product owners, leveraging Jira for feature backlog management and release planning, which boosted customer goal delivery by 30% and team productivity by 20%
- Designed and developed Single page components with Angular, HTML5, CSS3, and Bootstrap, improving user experience and achieving a 30% faster load time
- Contributed to front-end enhancements using ReactJS for internal dashboards, building reusable components and improving UI responsiveness
- Participated in defining project scope, documenting system requirements, estimating technical effort, and ensuring solutions aligned with regulatory and operational constraints common in financial systems
- Led peer deign and code reviews to enforce best practices (accuracy, testability, efficiency) resulting 25% reduction in production code defects and raising overall team quality standards

EDUCATION

- **M.S in Computer Engineering,** New Jersey Institute of Technology, Newark, NJ
- **B.E in Electronics and Communication Engineering,** Gujarat Technological University, India
